

## To Author Comments

Judge	Score
<b>Reviewer 1</b>	The mathematical foundation for the game theoretic valuation of engineering work based on an inverted appraisal of risk is novel but problematic. The mathematical development should be further developed or omitted. The ideas themselves might be better suited to an economics journal or even an accounting publication where many of these issues may previously have been dealt with.
<b>Reviewer 2</b>	No Scores
<b>Reviewer 3</b>	Make an application. Show the complete application of blockchain technology to an engineer/company/product/etc and be specific enough so an interested reader could replicate the work.

## Summary Against Publication Comments

Judge	Score
<b>Reviewer 1</b>	I'm not sure the authors will be able to transform the tangible and intangible economies with their Innovation Bank, but it is still an interesting attempt. I would recommend conference publication with the required changes of providing more thorough footnoting and a greater development of the overly simplistic mathematical presentation.
<b>Reviewer 2</b>	I don't know, Sorry! as blockchain is not my field.
<b>Reviewer 3</b>	Authors have presented paper at NSPE and ASCE (Ref 6 and Ref 10). There is little addition beyond what has already been presented.
