

Summary Against Journal Comments

Judge	Score
Reviewer 1	The ideas within the paper are interesting and unique when applied to the engineering world. Journal publication could help disseminate their idea of quantifying what it is an engineer contributes to a project, monetarily and otherwise, helping others to better appreciate the engineer's contribution. However, significant work would need to be done in tying this effort to existing literature. The references are vague and insufficient for the breadth of the subject matter.
Reviewer 2	I don't know, Sorry! as blockchain is not my field.
Reviewer 3	Not close to the quality required for journal consideration. Rewrite the abstract to sound less like an introduction and have it include summary of the problem being addressed, the work done, and main conclusions.
